## Datasheet \& Protocol

## ELISA Flex: <br> Sheep IL-17A (ALP)

3127-1A-6 | 3127-1A-20

ELISA Flex kit for quantitative determination of native sheep IL-17A in solution, e.g. cell supernatant.

|  | $3127-1 A-6$ <br> for 6 plates | $3127-1 A-20$ <br> The kit includes <br> for 20 plates |
| :--- | :---: | :---: |
| Capture mAb: $\quad$ MT49A7 $(0.5 \mathrm{mg} / \mathrm{ml})$ | $300 \mu \mathrm{l}$ | $1000 \mu \mathrm{l}$ |
| Detection mAb: $\quad$ MT51B8, biotin $(0.5 \mathrm{mg} / \mathrm{ml})$ | $150 \mu \mathrm{l}$ | $500 \mu \mathrm{l}$ |
| Streptavidin-ALP | $80 \mu \mathrm{l}$ | $250 \mu \mathrm{l}$ |
| Recombinant bovine IL-17A ELISA standard | 1 vial | 1 vial |
| Standard reconstitution buffer A5 | 1 ml | 1 ml |

To ensure total recovery of the stated quantity, vials have been overfilled.

## Shipping and storage

Shipped at ambient temperature. All reagents should be stored at $4-8{ }^{\circ} \mathrm{C}$ upon receipt, except the standard which should be stored at $-20^{\circ} \mathrm{C}$. Antibodies are supplied in sterile-filtered PBS with sodium azide (0.02\%). Streptavidin-ALP is supplied in 0.1 M Tris buffer with $0.002 \%$ Kathon CG. The expiry date indicates how long unopened products, stored according to instructions, are recommended for use.

## General and Preparations

## Specificity

The kit contains a matched pair of monoclonal antibodies (mAbs) specific for native and recombinant bovine IL-17A. The mAbs cross-react with IL-17A from sheep. The ELISA standard is recombinant bovine IL-17A.

## Standard range

1-200 pg/ml

## Calibration

No international standard exists for calibration.

## Reconstitution of ELISA standard

Reconstitute the ELISA standard to a stock solution of $0.5 \mu \mathrm{~g} / \mathrm{ml}$ by adding 1 ml of the standard reconstitution buffer. Allow the standard to dissolve for 5 minutes and mix thoroughly. The standard should be kept in aliquots at $-20^{\circ} \mathrm{C}$. Avoid repeated freeze-thaw cycles.

## Preparation of standard curve

Prepare within 30 minutes of use. Volumes are sufficient for duplicates.

## Protocol

## Day 1

1. Add $100 \mu \mathrm{l} /$ well of capture mAb MT49A7 diluted to $2 \mu \mathrm{~g} / \mathrm{ml}$ in PBS, pH 7.4 . Use high protein binding ELISA plates. Incubate overnight at $4-8^{\circ} \mathrm{C}$.

## Day 2

2. Empty the plate and add $200 \mu /$ well of PBS with $0.05 \%$ Tween 20 and $0.1 \%$ BSA (incubation buffer) to block the plate. Incubate for 1 hour at room temperature.
3. Wash the plate 5 times with PBS containing $0.05 \%$ Tween $20(300 \mu / / w e l l)$.
4. Add $100 \mu \mathrm{l} /$ well of samples or standards diluted in incubation buffer. Include assay background control, i.e. wells without standard. Incubate for 2 hours at room temperature.
5. Wash as above.
6. Add $100 \mu /$ well of detection mAb MT51B8-biotin diluted to $1 \mu \mathrm{~g} / \mathrm{ml}$ in incubation buffer. Incubate for 1 hour at room temperature.
7. Wash as above.
8. Add $100 \mu / /$ well of Streptavidin-ALP diluted 1:1000 in incubation buffer. Incubate for 1 hour at room temperature.
9. Wash as above.
10. Add $100 \mu /$ well of pNPP substrate (product code: 3652 -P10) and incubate at room temperature protected from direct light for approximately 60 minutes.
11. Measure the optical density in an ELISA reader at 405 nm . Preferably use a reader capable of subtracting a reference wavelength of between 570 and 650 nm . Representative standard curve shown below.

Sheep IL-17A

Developed and manufactured by MABTECH AB, Sweden, whose quality management system complies with the standards ISO 9001:2015 \& ISO 13485:2016.

The products are for research use only.
MABTECH shall not be liable for the use or handling of the product or for consequential, special, indirect or incidental damages there from.
