Bovine IL-8 (CXCL8) ELISA development kit
Product Code: 3114-1H-6

CONTENTS, development kit for 6 plates:

Vial 1 (purple top)
Monoclonal antibody MT8H6 (300 μl)
Concentration: 0.5 mg/ml

Vial 2 (blue top)
Biotinylated monoclonal antibody 26E5 (50 μl)
Concentration: 0.5 mg/ml

Vial 3 (white top)
Streptavidin-Horseradish Peroxidase (80 μl)

Vial 4
Recombinant bovine IL-8 standard (0.3 μg)

To ensure total recovery of stated quantity, vials have been overfilled.

STORAGE:
Shipped at ambient temperature. On arrival box 1 should be stored refrigerated at 4-8°C and box 2 should be stored frozen at -20°C.
**Intended use:** For quantitative determination of native or recombinant bovine IL-8 in solution, e.g. cell culture supernatant and serum/plasma samples. The monoclonal antibodies were developed for human IL-8 and cross-react with IL-8 from cow, monkey and dog.

**Reagents:** Antibodies are supplied in sterile-filtered (0.2 μm) PBS with sodium azide (0.02%). Streptavidin-HRP is supplied in PBS with 1% BSA and 0.002% Kathon CG.

**Standard range:** 8-800 pg/ml

**Standard calibration:** No international standard exists for calibration
Guidelines for Bovine IL-8 (CXCL8) ELISA

Day 1 1. Coat a high protein binding ELISA plate with mAb MT8H6, diluted to 2 μg/ml in PBS, pH 7.4, by adding 100 μl/well. Incubate overnight at 4-8°C.

Day 2 2. Wash twice with PBS (200 μl/well).
3. Block plate by adding 200 μl/well of PBS with 0.05% Tween 20 containing 0.1% BSA (incubation buffer). Incubate for 1 hour at room temperature.
4. Wash five times with PBS containing 0.05% Tween20.
5. Prepare IL-8 standard by reconstituting contents of vial 4 in 1 ml PBS to a concentration of 0.3 μg/ml. Leave at room temperature for 15 minutes and then vortex the tube. The stock solution should be used immediately or stored in aliquots at -20°C for future use. We recommend the aliquots not be refrozen after initial use. For the test, prepare dilutions of the stock using the standard range as a guideline.
6. Add 100 μl/well of samples or standards diluted in incubation buffer and incubate for 2 hours at room temperature.
7. Wash as in step 4.
8. Add 100 μl/well of mAb 26E5-biotin at 0.1 μg/ml in incubation buffer. Incubate for 1 hour at room temperature.
10. Add 100 μl/well of Streptavidin-HRP diluted 1:1000 in incubation buffer. Incubate for 1 hour at room temperature. Please note that sodium azide used in buffers will inhibit HRP activity.
12. Add 100 μl/well of appropriate substrate solution e.g. TMB, available from Mabtech product code 3652-F10.
13. Measure the optical density in an ELISA reader after suitable developing time. If required stop the reaction first.
NOTE; for research use only.

MABTECH shall not be liable for the use or handling of the product or for consequential, special, indirect or incidental damages therefrom.

Developed and manufactured by MABTECH AB, Sweden, whose quality management system complies with the above standards.
