

Porcine IFN- γ ELISA development kit

Product Code: 3130-1A-20

CONTENTS, development kit for 20 plates:

Vial 1 (blue top)

Monoclonal antibody pIFN γ -I (1 ml)

Concentration: 0.5 mg/ml

Vial 2 (red top)

Biotinylated monoclonal antibody P2C11 (500 μ l)

Concentration: 0.5 mg/ml

Vial 3 (white top)

Streptavidin-Alkaline Phosphatase (250 μ l)

Vial 4

Recombinant porcine IFN- γ standard

To ensure total recovery of stated quantity, vials have been overfilled.

STORAGE:

Shipped at ambient temperature. On arrival box 1 should be stored refrigerated at 4-8°C and box 2 should be stored frozen at -20°C.

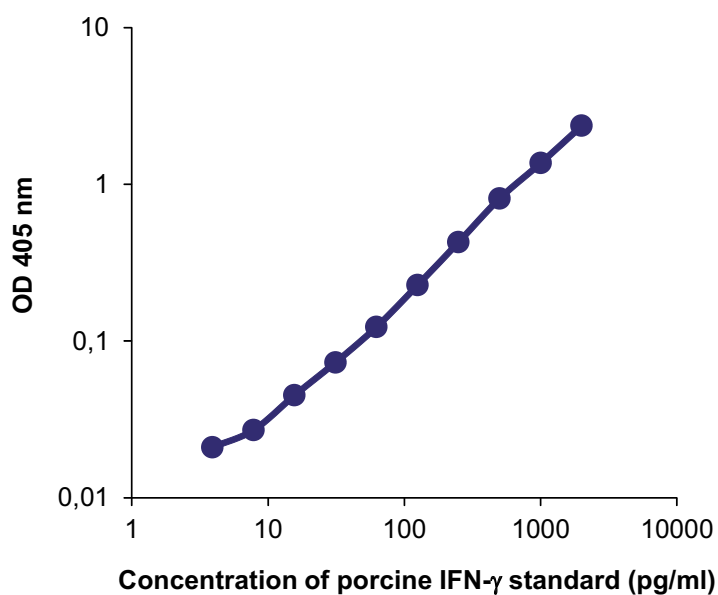

General

Intended use: For quantitative determination of native and recombinant porcine IFN- γ in solution, e.g. cell culture supernatant and serum/plasma samples.

Reagents: Antibodies are supplied in sterile-filtered (0.2 μm) PBS with sodium azide (0.02%). Streptavidin-ALP is supplied in 0.1 M Tris buffer with 0.002% Kathon CG.

Standard range: 14-1400 pg/ml.

Standard calibration: No international standard exists for calibration.

Guidelines for Porcine IFN- γ ELISA

- Day 1**
1. Coat a high protein binding ELISA plate with mAb pIFN γ -I, diluted to 2 μ g/ml in PBS, pH 7.4, by adding 100 μ l/well. Incubate overnight at 4-8°C.
- Day 2**
2. Wash twice with PBS (200 μ l/well).
 3. Block plate by adding 200 μ l/well of PBS with 0.05% Tween 20 containing 0.1% BSA (incubation buffer). Incubate for 1 hour at room temperature.
 4. Wash five times with PBS containing 0.05% Tween.
 5. Prepare porcine IFN- γ standard by reconstituting contents of vial 4 in 1 ml PBS with 0.1% BSA to give a concentration of 0.5 μ g/ml. Leave at room temperature for 15 minutes, then vortex the tube and spin down. Use immediately or store in aliquots at -20°C for future use. We recommend the aliquots not to be refrozen after initial use. For the test, prepare dilutions of the stock using the standard range as a guideline.
 6. Add 100 μ l/well of samples or standards diluted in incubation buffer and incubate for 2 hours at room temperature.
 7. Wash as in step 4.
 8. Add 100 μ l/well of mAb P2C11-biotin at 1 μ g/ml in incubation buffer. Incubate for 1 hour at room temperature.
 9. Wash as in step 4.
 10. Add 100 μ l/well of Streptavidin-ALP diluted 1:1000 in incubation buffer. Incubate for 1 hour at room temperature.
 11. Wash as in step 4.
 12. Add 100 μ l/well of appropriate substrate solution e.g. p-nitrophenyl-phosphate (pNPP), available from Mabtech product code 3652-P10.
 13. Measure the optical density (405 nm for pNPP) in an ELISA reader after suitable developing time.

Developed and manufactured by MABTECH AB, Sweden, whose quality management system complies with the standards ISO 9001:2015 & ISO 13485:2016.
